

In healthcare, every second counts.

Save time and save lives with Real-Time Location System Plus.

Real-Time Location System Plus (RTLS+) provides the tools and analytics required to vigilantly monitor and locate critical hospital equipment. Unlike other tracking solutions, RTLS+ enables facilities to:

- Improve speed and quality of care with real-time equipment identification and location, so that staff can find the exact equipment they need, when they need it.
- Reduce the cost of misplaced and stolen equipment by leveraging AI & ML video analytics, geo-fencing, and beacons to ensure equipment stays on-site.
- Proactively monitor equipment by receiving real-time notifications and alerts when equipment moves outside of pre-determined locations.

Save time, improve quality of care, and reduce costs with RTLS+ from Claro Enterprise Solutions.
